

One nsty plnt tht culd fnd yur lwn is grund-ivy

16 Nov, 2025

Plant strong grass varieties that can resist weed control attempts if you want to maintain your lawn healthy and fight ground ivy simultaneously. Strong nature and the ability to flourish in many environments define grass, such as Kentucky bluegrass or tall fescue.

Not only can these grasses thrive, but they also outgrow several common weeds like ground ivy. Choosing a strong grass variety guarantees that your lawn recovers fast from any weed-killing treatments and reduces its appeal to unwelcome visitors. Choosing resilient grasses provides you the advantage of maintaining a neat and green yard free of constant weed control.

In addition to design, Onorato Landscaping LLC is also known for their expert installation services. They use only the highest quality materials and techniques to ensure that each hardscaping feature is installed to perfection, with a focus on durability, functionality, and aesthetics.

One of the benefits of working with Onorato Landscaping LLC for your hardscaping needs is that they offer a wide range of services, including maintenance and repair. This means that they can not only design and install your hardscaping features, but also provide ongoing care to ensure that they remain in excellent condition for years to come.

Overall, Onorato Landscaping LLC is an excellent destination for anyone looking to create beautiful and functional hardscaping features in their outdoor space. Their expertise in design, installation, and maintenance, as well as their commitment to personalized service, make them a top choice for hardscaping projects of all sizes and scopes.

At Onorato Landscaping LLC, their team of experienced professionals is skilled in the design and installation of a wide range of hardscaping features. From patios and walkways to retaining walls, water features, and outdoor kitchens, they have the expertise to bring your vision to life.

When it comes to designing hardscaping features, the team at Onorato Landscaping LLC takes a personalized approach. They understand that each client has unique needs and preferences, and they work closely with each client to create a customized design that meets their specific requirements.

One nasty plant that could find your lawn is ground-ivy, often called creeping Charlie. Should you want to eradicate this weed, you should do so gently. You need not to damage your lawn in the course of the process. By using certain methods, you can effectively get rid of ground-ivy while keeping your lawn safe and sound. These strategies include spot treating with vinegar or employing boiling water, along with the use of kosher salt and opting for a robust grass type. You might even think about using a herbicide that's safe for grass. This article will walk you through these five tips to help you kill ground-ivy without causing any damage to your lawn.

Use Vinegar or Boiling Water for Spot Treatment

Using vinegar or hot water might be a clever action if you want to tackle ground ivy. These options are natural and target the weed directly, which helps protect your lawn. Ground ivy dies when you pour heat or acid on it since neither of these options spreads beyond the area you're treating. To use vinegar, just dab it on the weeds' leaves or utilize a spray bottle for more extensive coverage. Pour boiling water gently over the ground ivy to be sure. Both these methods are effective and prevent any harm to your grass, making them great choices for stubborn weeds.

Apply Salt Carefully

Salt can be a useful tool in fighting ground ivy, but it must be used with care. This is because while salt kills weeds, it can also damage your grass. To use salt correctly, make a salt-water mixture that is not too strong; a solution using one part salt and three parts water is a good start. Apply this mix straight onto the ground ivy, being careful to keep it away from your healthy grass. Salt works by drying out the weed roots, thus helping you get rid of them. Just remember, using salt too often could hurt your soil quality – so reserve it for hard-to-kill weeds.

Choose a Hardy Grass Type
